

Action on Covid and Long Covid (final version - approved GPRC 21 July 2024)

The Green Party of England and Wales believes that the Government should follow expert advice and immediately act to:

- Improve air quality in public indoor spaces such as schools, hospitals, public transport, and workplaces to mitigate risks of infection
- Equip our NHS to provide safe environments for patients and staff
- Restore free lateral flow testing and re-instate supported isolation protocols for infected people, their carers, and family members
- Support research into improved vaccines and therapeutics, and set up a post-viral chronic illness research taskforce to improve understanding and treatments of Long-COVID, ME and chronic fatigue syndromes.

Implement a comprehensive, safe, evidence-based vaccination and booster programme.
